eCS48 - Nasal Columella Injuries in Premature Gestational Age Infants

Presenter: T. Ball

Nasal Columella Injuries in Premature Gestational Age Infants

Purposes:
- To describe the incidence of nasal columella injuries in premature infants
- To discuss the management and treatment of nasal columella injuries
- To provide guidelines for preventing and managing nasal columella injuries

Methods:
- Retrospective review of medical records
- Analysis of incidence and management of nasal columella injuries

Results:
- High incidence of nasal columella injuries in premature infants
- Effective management strategies for preventing and managing nasal columella injuries

Conclusions:
- Early recognition and appropriate management are crucial
- Continuous education and awareness are necessary among healthcare providers

References:

Acknowledgements:
- Thank you to the medical team for their contributions to this research.

Practice Implications:
- Implementation of preventive measures is essential
- Continuous evaluation and improvement of management strategies

Limitations:
- Limited data due to retrospective study
- Potential for selection bias

Keywords:
- Nasal columella injuries
- Premature infants
- Incidence
- Management
